

## The Company: who we are, why work for Tiny Prints

We're a fast growing private company taking on the competition in a big, bold way! As a cutting-edge, web-based technology company, we are constantly taking on new challenges in the world of social exchange and expression. We insist on hiring innovative pioneers who think creatively, make a positive impact on our organization and know how to hit the ground running. We don't want our colleagues to find incremental solutions, but rather to pose questions that no one has ever asked before while identifying exciting new opportunities.

Tiny Prints is a 5 year old private company that is growing rapidly in a huge \$25B stationery, greeting cards and photo products addressable market in the US. Be part of a revolution as this massive offline market goes online. We have a passion to win that is exemplified by our triple digit revenue growth in the first five years. We have been profitable every quarter since we started and bootstrapped the company for the first 4.5 years of the company's life to build a strong culture and long-term vision. We're passionately proud of our startup, entrepreneurial culture where we work hard to win, to have fun together while enjoying close friendships and developing cool new solutions. We're not afraid to put in long hours when necessary but also ready to celebrate with friends often. We're now funded by two of the planets biggest, most successful growth investors with a proven record of building great successful companies that are built to last.

## The area: Engineering & Technology

Software Engineers / Web Developers at Tiny Prints develop the cutting-edge, web-based technology solutions for social exchange and expression. In addition to revolutionizing the online personalized card and stationery retail market, we're applying our world-class programming skills to create innovative applications to help users manage and organize their social events and expressions and make it universally accessible and useful. Working collaboratively in small, agile teams, we do rapid design, development, testing, and deployment producing an environment that combines the entrepreneurial feel of a start-up with the resources and stability of a healthy, stable, growing business.

## The role: Software Engineer / Web Developer (New Graduates welcome!)

We collaborate on multitudes of smaller projects that have universal appeal - which requires research, awareness, interactivity, and asking questions. You build strong competencies in web development, scalability, web services, search engine optimization, social and community platform, along with a technical fascination for how stuff fits together.

You need to have a solid foundation in computer science in order to consistently come up with new ideas as well as strive for a deep understanding of our products and services in order to continually improve upon them. We focus on being a collaborative organization consisting of engineers with the highest levels of technical depth, programming skills and a passion for quality.
